## Touch inputs

- Beside voice control you can operate MBUX via touchscreen as well as touch control buttons on the steering wheel

## Maintenance and service

- Wondering when the next service is due? Or how much further you can drive until you need to stop at a petrol station? Just ask your MBUX – it will tell you the answer

Times are from 10–80% charge using a wallbox (three-phase) or standard socket (single-phase). <sup>5</sup>Specified voltage and current values refer to network infrastructure and can be limited by the vehicle. Times are from 0–100% charge using a wallbox (three-phase) or standard socket (single-phase). <sup>6</sup>The certified electrical consumption is generally determined at maximum AC charging capacity using a Mode 3 cable. It is therefore recommended that vehicles with a HV battery preferably be charged at a wallbox or an AC charging station with a Mode 3 cable in order to achieve shorter charging times and improved charging efficiency.

These models require mains electricity for charging <sup>3</sup>The certified electrical consumption is generally determined at maximum AC charging capacity using a Mode 3 cable. It is therefore recommended that vehicles with a HV battery preferably be charged at a wallbox or an AC charging station with a Mode 3 cable in order to achieve shorter charging times and improved charging efficiency <sup>4</sup>Specified voltage and current values refer to network infrastructure and can be limited by the vehicle. Figures shown may include options which are not available in the UK. For Plug-in Hybrid Electric Vehicle (PHEV) figures determined with the battery fully charged, using a combination of both battery power and fuel. These models require mains electricity for charging <sup>3</sup>The certified electrical consumption is generally determined at maximum AC charging capacity using a Mode 3 cable. It is therefore recommended that vehicles with a HV battery preferably be charged at a wallbox or an AC charging station with a Mode 3 cable in order to achieve shorter charging times and improved charging efficiency <sup>4</sup>Specified voltage and current values refer to network infrastructure and can be limited by the vehicle. Times are from 10-80% charge using a wallbox (three-phase) or standard socket (single-phase) <sup>5</sup>Specified voltage and current values refer to network infrastructure and can be limited by the vehicle.
